# The 2011 Scripting Games Beginner Event 9: Use PowerShell to Create a File Name Based on a Date

ScriptingGuy1

14 Apr 2011 1:01 AM

<u>12</u>

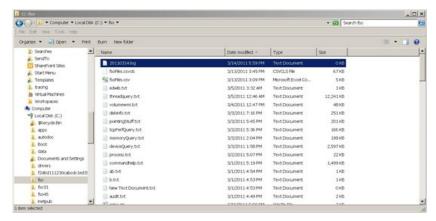

**Summary**: Beginner Event 9 in 2011 Scripting Games uses Windows PowerShell to create a file with a name that is based on a date.

#### About this event

Division	Beginner
Date of Event	4/14/2011 12:01 AM
Due Date	4/21/2011 12:01 AM

## **Event scenario**

You need to add the ability to create a log file to one of your scripts. You would like the file name to follow the year, month, and day pattern so that you can easily discover which log file represents which day. For the purposes of this event, it is only necessary to create a text file with the name made up of the year, month, and day. An example of such a file name is **20110414.log**. An example of such a file in a folder is shown in the following image.

# **Design points**

- You can save the file anywhere you wish.
- You do not have to use a .log file extension (you can use .txt or another extension if you wish).
- · Extra points for detecting a previously existing file with same name and prompting for a new file name to use.

Yes we are still grading submissions. We will in fact be grading submissions after the last script is submitted on Friday night at midnight (-7 GMT). Judges will be working frantically over the weekend catching up. The final

4/19/2015	The 2011 Scripting Games Beginner Event 9: Use PowerShell to	g Guy! Blog - Site Home - TechNet		
	leader board will be posted sometime on Monday. Many of the judges are at the PowerShell Deep Dive conference and have been unable to grade scripts because the conference has taken all their time (I am also here at the conference). All scripts will be graded at least twice. So if yours is submitted it will be graded.
